**Bryan Ward, MD,** is an associate professor in the Department of Otolaryngology-Head and Neck Surgery at Johns Hopkins University School of Medicine. Dr. Ward is a clinician-scientist with research interests that include peripheral vestibular physiology and pathophysiology, focusing on the interactions of strong magnetic fields, such as in MRI machines, with the inner ear, on improving MRI technology to image the inner ear, and on temporal bone histopathology.

He recently completed an NIH career development award and is supported by an NIH center grant on temporal bone histopathology and by an R01 to develop vestibular implants. In addition to his otology & neurotology practice, he has a clinical focus on inner ear vestibular and Eustachian tube disorders.
